User Manual

AMT-PVR-10

Date: July 2022

Doc Version: 1.2

English

Thank you for choosing our product. Please read the instructions carefully before operation. Follow these instructions to ensure that the product is functioning properly. The images shown in this manual are for illustrative purposes only.

For further details, please visit our Company's website www.armatura.us.

Trademark

ARMATURA is a registered trademark of ARMATURA LLC. Other trademarks involved in this manual are owned by their respective owners.

Disclaimer

This manual contains information on the operation and maintenance of the ARMATURA product. The copyright in all the documents, drawings, etc. in relation to the ARMATURA supplied product vests in and is the property of ARMATURA. The contents hereof should not be used or shared by the receiver with any third party without express written permission of ARMATURA.

The contents of this manual must be read as a whole before starting the operation and maintenance of the supplied product. If any of the content(s) of the manual seems unclear or incomplete, please contact ARMATURA before starting the operation and maintenance of the said product.

It is an essential pre-requisite for the satisfactory operation and maintenance that the operating and maintenance personnel are fully familiar with the design and that the said personnel have received thorough training in operating and maintaining the machine/unit/product. It is further essential for the safe operation of the machine/unit/product that personnel have read, understood, and followed the safety instructions contained in the manual.

In case of any conflict between terms and conditions of this manual and the contract specifications, drawings, instruction sheets or any other contract-related documents, the contract conditions/documents shall prevail. The contract specific conditions/documents shall apply in priority.

ARMATURA offers no warranty, guarantee, or representation regarding the completeness of any information contained in this manual or any of the amendments made thereto. ARMATURA does not extend the warranty of any kind, including, without limitation, any warranty of design, merchantability, or fitness for a particular purpose.

ARMATURA does not assume responsibility for any errors or omissions in the information or documents which are referenced by or linked to this manual. The entire risk as to the results and performance obtained from using the information is assumed by the user.

ARMATURA in no event shall be liable to the user or any third party for any incidental, consequential, indirect, special, or exemplary damages, including, without limitation, loss of business, loss of profits, business interruption, loss of business information or any pecuniary loss, arising out of, in connection with, or relating to the use of the information contained in or referenced by this manual, even if ARMATURA has been advised of the possibility of such damages.

This manual and the information contained therein may include technical, other inaccuracies, or typographical errors. ARMATURA periodically changes the information herein which will be incorporated into new additions/amendments to the manual. ARMATURA reserves the right to add, delete, amend, or modify the information contained in the manual from time to time in the form of circulars, letters, notes, etc. for better operation and safety of the machine/unit/product. The said additions or amendments are meant for improvement /better operations of the machine/unit/product and such amendments shall not give any right to claim any compensation or damages under any circumstances.

ARMATURA shall in no way be responsible (i) in case the machine/unit/product malfunctions due to any non-compliance of the instructions contained in this manual (ii) in case of operation of the machine/unit/product beyond the rate limits (iii) in case of operation of the machine and product in conditions different from the prescribed conditions of the manual. The product will be updated from time to time without prior notice. The latest operation procedures and relevant documents are available on http://www.armatura.us.

If there is any issue related to the product, please contact us.

ARMATURA Headquarters

Address 190 Bluegrass Valley Pkwy,
Alpharetta, GA 30005.

About the Company

ARMATURA is a leading global developer and supplier of biometric solutions which incorporate the latest technologies on biometric hardware design, algorithm research and software development. ARMATURA holds numerous patents in the field of biometric recognition technologies. Its products are primarily used in business applications which require high-secured, high-accurate and fast matching and identification processes.

ARMATURA biometric hardware and software are built into the product of world top workforce management (WFM) solution providers, Point-of-Sale (PoS) terminals vendors, intercoms, electronic safes, metal key lockers, dangerous machinery, and many other product vendors which heavily rely on accurate, secured and fast user identification features.

About the Manual

This manual introduces the operations of AMT-FAM-10, a dual-lens near-infrared light and visible light face module.

All figures displayed in this manual are for illustration purposes only which may not be exactly consistent with the actual product.

Document Conventions

Conventions used in this manual are listed below:

GUI Conventions

For Software	
Convention	Description
Bold font	Used to identify software interface names e.g. **OK**, **Confirm**, **Cancel.**
>	Multi-level menus are separated by these brackets. For example, File > Create > Folder.
For Device	
Convention	Description
< >	Button or key names for devices. For example, press <OK>.
[ ]	Window names, menu items, data table, and field names are inside square brackets. For example, pop up the [New User] window.
/	Multi-level menus are separated by forwarding slashes. For example, [File/Create/Folder].

Symbols

Convention	Description
	This represents a note that needs to pay more attention to.
	The general information which helps in performing the operations faster.
	The information which is significant.
	Care taken to avoid danger or mistakes.
	The statement or event that warns of something or that serves as a cautionary example.

Table of Contents

1 Product Introduction

1.1 Overview

AMT-PVR-10 is a single-lens near infrared light camera module that supports to capture the palm print and palm vein grayscale images for recognition process. The module is configured with near-infrared LED lights, wide dynamic image sensor, and aspherical distortion-free camera lens. The module's built-in high-performance, low-power-consumption processor is up to 400MHz. Single USB cable is utilized to provide low-voltage power supply and rich communication interfaces, making it easy to integrate with 3rd party host device.

AMT-PVR-10 captures the surface-area palm prints and subcutaneous palm veins in a single image. The associated PalmLite SDK takes the approach of the surface-area palm print patterns such as palm lines and ridges, as well as subcutaneous palm vein patterns, to identify individual user.

The near-infrared (NIR) light has the feature to penetrate the skin and present subcutaneous vascular patterns in grayscale image when active fresh blood flows over the vessel system. As a result it provides high-secured anti-spoofing protection benefit, in addition, the palm veins are not exposed to public and requires special device to collect, it has less privacy concerns compared to face recognition approach.

The combination of palm print and palm vein patterns together provide an unreplicable, robust, and unique biometric features of for individual identification and verification.

The software development kits AMT PalmLite SDK allows easy and agile integration of palm recognition functions to 3rd party applications. The palm module and the SDK together provide an affordable biometric solution to SMB customers. The solution is widely applied to workforce management, access control and security, single sign-on, identity management areas and more...

1.2 Features

- Supports Near-Infrared Palm Vein acquisition.
- Provides hygienic, non-invasive and stress-free usage in public with 100% contactless experience.
- Easy and agile integration with compact and light-weight size and USB 2.0 interface.
- Saves the power and extends module lifespan with built-in distance detection sensor.

- Adaptable to various lighting conditions with wide dynamic image sensor.
- High process speed up to 25 frames per second with built-in high-performance processor.
- Supports wide palm recognition range from 15 cm ~ 35 cm or 6 inches ~ 14 inches.
- Supports high-quality palm vein image from wet or dry hand.
- The PalmLite SDK supports common operating systems including Windows, Android and Linux.
- Low power consumption less than 2.0 Watts.

2 Product Specifications

2.1 Technical Specifications

Features	Technical Specifications
Processor	Low-power-consumption processor, 400MHz
Image Sensor	1/2.7", HDR CMOS, Near-infrared light
Connector	7-pin 1.25mm USB 2.0
Communication Interface	USB 2.0 (High speed)
Power Requirements	USB 5V
Power Consumption	0.5W (Standby) / 1.5W (Operating)
Lighting Environment	Enrollment <800 Lux; Matching <2000 Lux
Humidity	0 to 90% RH
Dimensions	41.5 * 34 mm (Radius*Height) (±1 mm)
Certifications	CE, FCC, RoHS

2.2 Electrical Features

Specifications	Test Conditions	Min	Standard	Max
Operating Voltage	-	4.75V	5.0V	5.25V
Operating Current	T = 25℃/77°F, VCC = 5.0 V	-	350mA	400mA
Operating Power Consumption	T = 25℃/77°F, VCC = 5.0 V	-	1.75W	2.0W
Standby Current	T = 25℃/77°F, VCC = 5.0 V	-	150mA	170mA
Standby Power Consumption	T = 25℃/77°F, VCC = 5.0 V	-	0.75W	0.85W

Specifications	Test Conditions	Min	Standard	Max
Operating Temperature	-	–10℃/14°F	-	55℃/131°F
Storage Temperature	-	–20℃/-4°F	-	80℃/176°F

2.3 Optical and Image Specifications

Features	Technical Specifications
Sensor Model	HDR CMOS Sensor
Sensor Size	1/2.7 inch
Sensor Type	Optical
Image Size (pixel)	480W x 640H
Grayscale	256 levels
Dynamic Range	83 dB
Max. Frame Rate	25 fps
Lens Type	IR
Optical Wavelength	840 - 860 nm
Field of View (FOV)	Diagonal = 58°, Horizontal = 37°, Vertical = 48°
Optical Distortion Rate	≤1%
Lens Composition	Composed of 4-Plastic Lens and an IR-Filter (4P+1IR)

2.4 Model Specifications

Features	Technical Specifications
SDK	AMT PalmLite SDK v12
Recognition Angle	Yaw≤20°, Pitch≤ 20°, Roll≤90°, Bend ≤ 15°
Recognition Method	1:1 and 1:N
Capacity	6,000 templates
Accuracy	TAR=98.2% when FAR=0.05%
Recognition Time	<300ms (Quad-core Cortex-A9 up to 1.6GHz)
Windows	Windows XP / Windows 7 / Windows10 (32/64bits)
Android	Android 4.1 or higher version

3 Algorithm Specifications

3.1 Palm Recognition Algorithm

Palm recognition technology captures near-infrared light reflections to form images of surface-area palm lines and subcutaneous palm veins pattern and utilizes convergence to identify or verify individual identity. The technology boosts powerful anti-spoofing protection, as only active refresh blood flowing over the vessels can present grayscale images.

AMT PalmLite SDK is a high-performance and high-accuracy near-infrared palm recognition algorithm developed for large-volume palm recognition and tolerant to palm postures in various lighting conditions. It makes the algorithm and SDK suitable to a variety of applicable environments with very friendly user-experience.

The proper palm postures for enrollment and matching are shown in Figure 3.1:

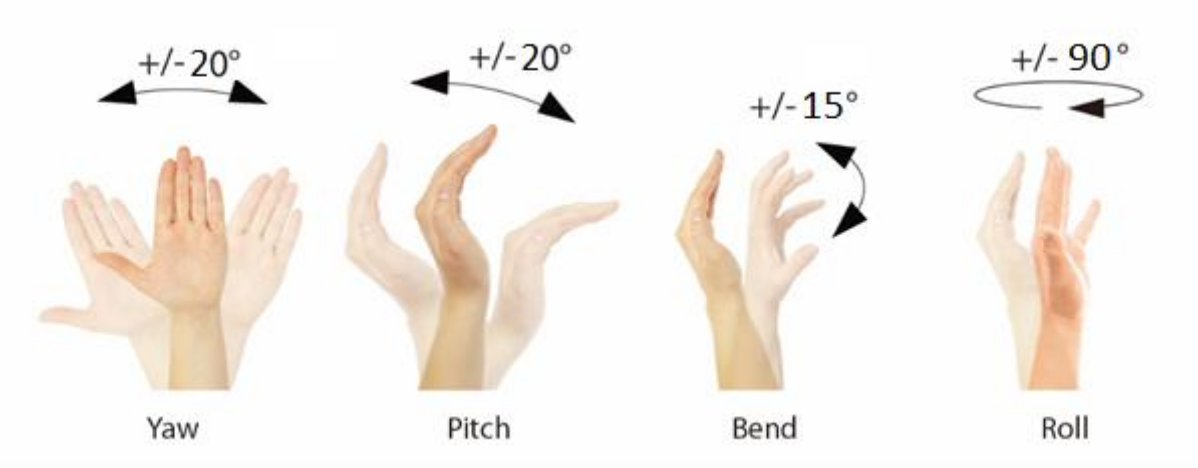

Figure 3.1 Definitions of palm postures

3.1.1 Palm Recognition Specifications

Algorithm Version	AMT PalmLite 12.0
Palm Detection Speed	< 50 ms
Biometric Template Extraction Speed	< 220 ms
Biometric Comparison Speed	< 150 ms
Palm Capacity	6,000
Posture Adaptability	Yaw ≤ 20°, Pitch ≤ 20°, Roll ≤ 90°, Bend ≤ 15°
Precision	TAR=98.2% when FAR=0.05%

3.1.2 Palm Registration Image Quality Requirements

The image saved while palm registration has JPG or BMP format and the minimum resolution is 160 x 120 pixels. The individual should take care of the following things while registering their palm:

The image for palm registration is in JPG or BMP format and the minimum resolution is 160 x 120 pixels. Please follow the following guidelines while registering the individual's palm:

- The palm should be separated from the background.
- The palm should be evenly illuminated to ensure good quality of the palm print and palm vein image.
- The whole palm (including the wrist) should be within the camera frame and the aspect ratio of the palm must not be distorted.
- Put the palm posture properly and keep the pitch, roll, yaw, and bend within 5 degrees.

Figure 3.2 Example of a palm registration image

4 Application Scenarios

The AMT-PVR-10 module is is optimized on its physical structure for the purpose of the built-in design and integration, facilitating easy and fast integration into third-party hardware device. Kept the integration thought into design, the module can be built into a host device using a single USB cable which provides both the power supply and data communication, this approach simplifies the integration development work considerably.

With AMT PalmLite SDK, you only need to write a few lines of code to call the SDK interfaces to achieve palm recognition in your application. It speeds the development work and improves the productivity. The integration solution can be applied to various business applications such as time attendance, access control, entrance management, payment kiosks, intercom units, turnstiles, PCs, tablets, and more.

5 Structural Dimensions

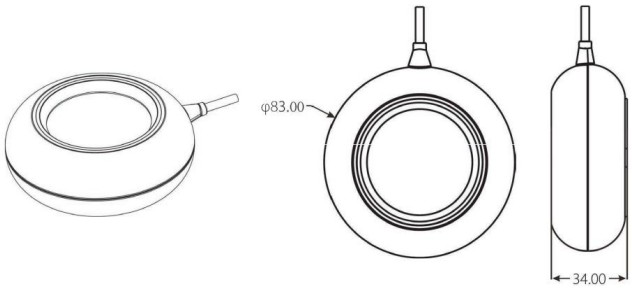

Figure 5.1 Structural dimensions (Unit: mm)

6 Operation Guide

6.1 Hand and Palm Placement

1. Keep your hand clean and place the palm about 15cm-35cm or 6inch-14inch away above the reader.
2. Keep the hand parallel to the reader. Ensure that the center of the palm is aligned with the center of the reader.
3. Stretch out the hand and keep palm open in natural posture.

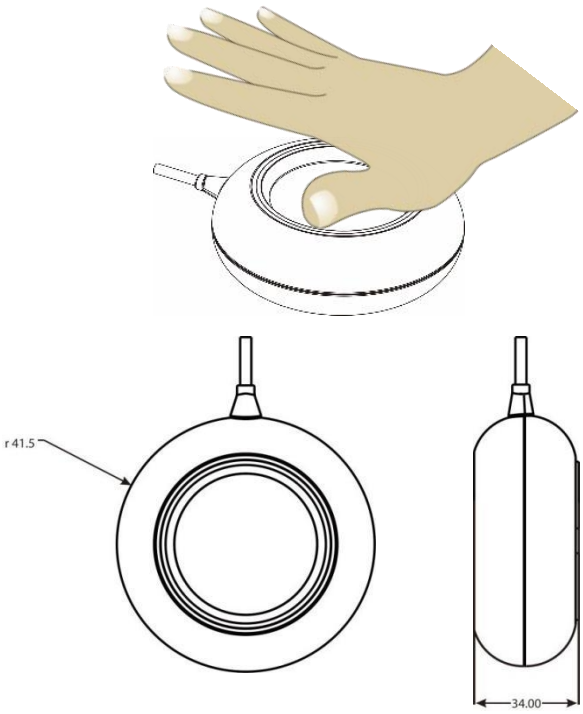

Figure 6.1 Correct palm posture

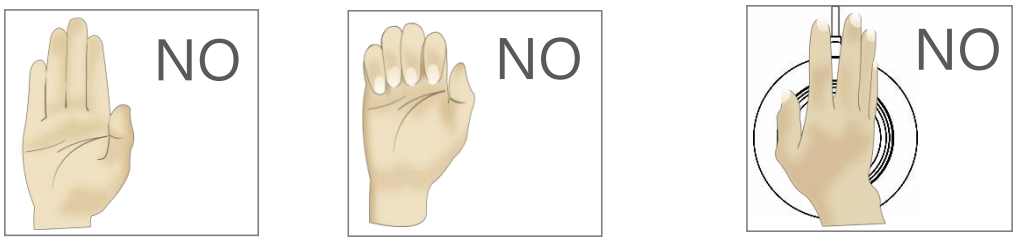
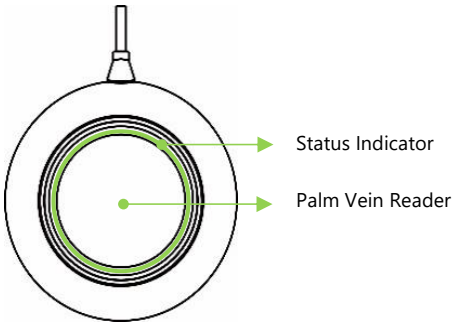


Fingers together Fingers bent Not parallel to the device

Figure 6.2 Incorrect palm posture

6.2 LED Indicator Status

Blue/Green/Red tri-color LED lights are built into the palm reader in a circle which is to indicate the palm image caputuring and matching operation status.
Follow the LED light status instructions during the registration or matching process, you can move your palm back and forth to a proper position, the green LED light indicates the operation is successfully completed.



Blue light	Detecting.
Green light	Registration is successful or matching is successful.
Red light	Registration is failed or matching is failed

Figure 6.2 LED light indicator on the palm reader

6.3 Operation Height and Angle

The installation heights and corresponding angles are recommended in Figure 9. The angle in the figure is the angle between the center axis of the lens and the horizontal ground (which is the same angle between the module lens plane and the vertical direction), and the height is the distance from the module to the ground.

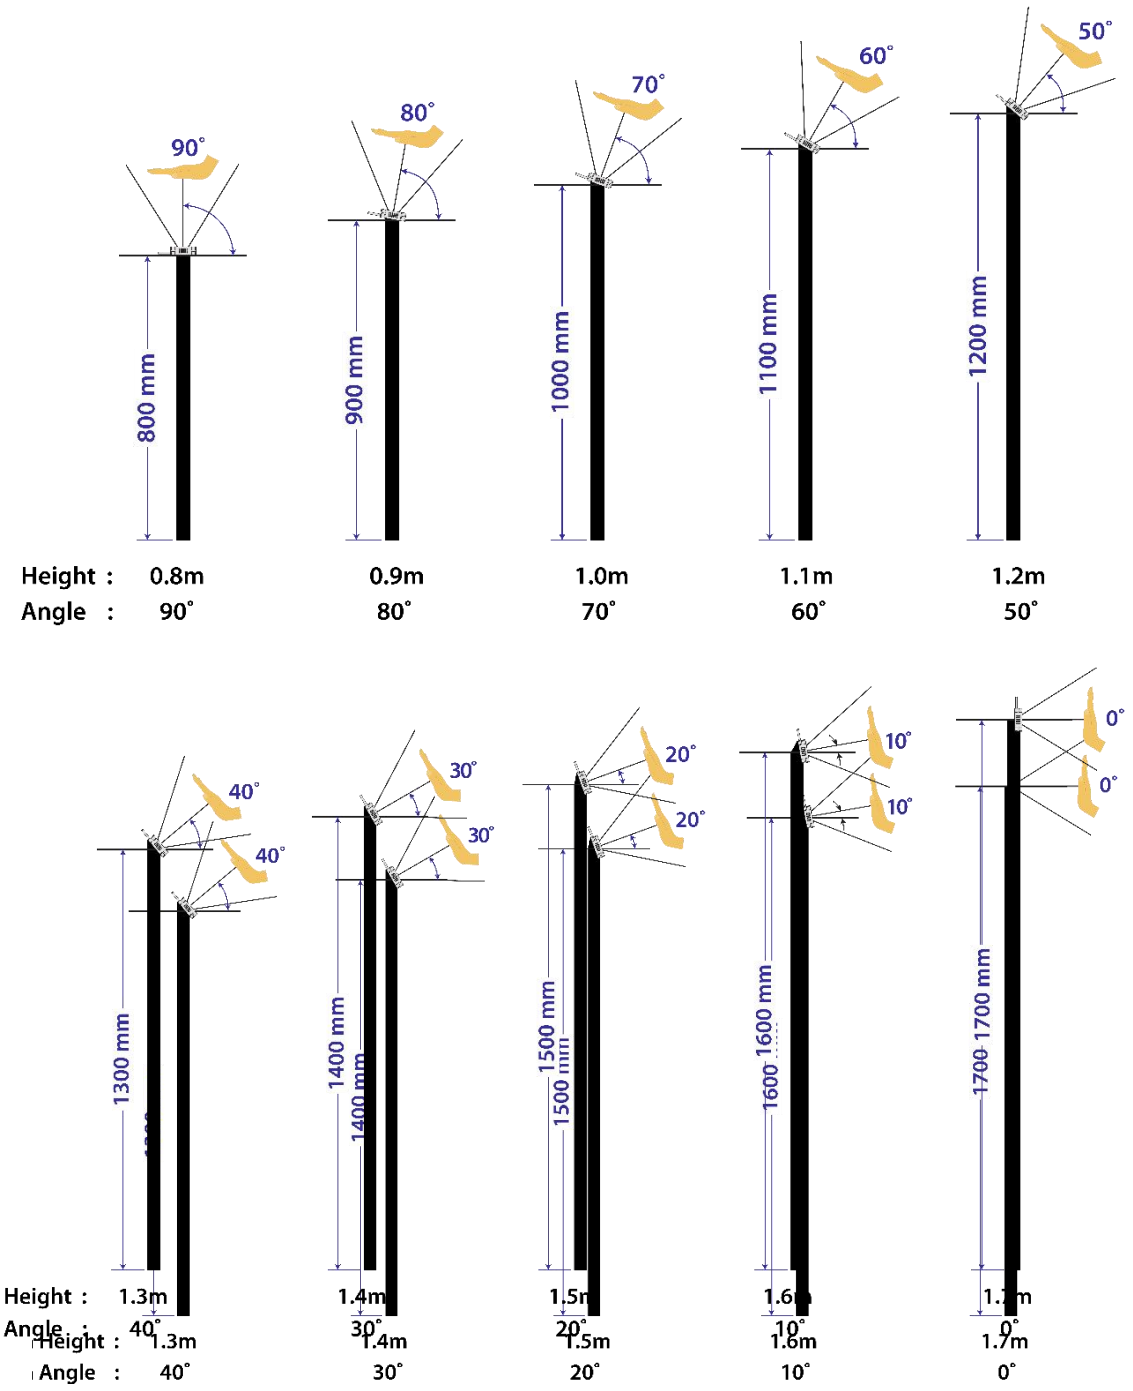


Figure 6.4 Operation Height and Angle

Operation Tips

- The module is installed and operated for indoor environment, please do not use it under direct sunlight.
- The module should not be disassembled without authorization, otherwise it voids its warranty.

6.4 Maintenance and Cleansing Guide

6.4.1 Maintenance

1. Please keep the product dry and clean.
2. Prevent the product from falling or collision.
3. Do not power on or power off the product too frequently.

6.4.2 Cleansing

1. Please Keep the product away from dust.
2. Use an adhesive tape to clean the collecting area.
3. Wipe the sensor with special lens cloth or issue.
4. Keep the sensor clean and dry for storage.

7 Frequetn Asked Questions

1. What shall I do when there is no response from the palm vein module even the module is connected?

Answer:

First, open the computer management from your windows system to check if AMT-PVM-10 has been successfully connected. Next, check whether the connection button in the demo (see attached software package) is enabled or not. If these two potential problems are excluded, please contact the technical support team in time to analyze the other reasons such as hardware failure, demo issues and so on.

2. What shall I do if it fails to register the user?

Answer:

Firstly, please confirm that AMT-PVM-10 has been already connected to the system, and then open the demo for initialization. Next, verify if the palm position, angle, and the palm placing distance are proper. Read the pop-up error code and check the reason for the error by comparing with the

development document. If the issue still exists, please contact the technical support team to resolve the issue.

3. What if the product doesn't work during identification?

Answer:

Firstly, confirm that the scanner is successfully connected to the system, and the demo can be opened normally. If there is no response, pull out and re-plugin the module. If the problem still exists, check the error code or change the module and continue identification. If the problem cannot be resolved, please contact the technical support team to check if it is a hardware problem.

4. What shall I do if the user verification fails after the module is connected to the PC and identifies the user successfully?

Answer:

If the user has been registered, please confirm you present the same palm for verification. And ensure the palm is placed in proper posture and distance . During verification, you can adjust the palm posture and distance, so that AMT-PVM-10 can better take high quality palm image.
